Title 20

**Certification
Processes**

California's Appliance Efficiency Regulations

Manufacturers and Distributors:

Did you know many appliances are regulated under Title 20 and must be certified to the California Energy Commission (CEC) to be sold or distributed in the state?

Help is Available

We are here to help you ensure your products meet the requirements of California's appliance and equipment efficiency energy code, Title 20 - which can help ensure that you don't encounter issues that impact your sales and bottomline, including avoiding facing civil penalties under Title 20 Section 1609 for noncompliant products.

Our technical experts will:

- ❖ Explain the Title 20 regulations and what compliance means for your business
- ❖ Walk you through the processes required to register and certify your appliances and equipment to the CEC
- ❖ Provide tips on how to incorporate these processes into your regular workflow

Helpful Resources

We offer training and resources on the following topics:

- ❖ Certification requirements, forms, and processes
- ❖ Accessing the CEC Modernized Appliance Efficiency Database System (MAEDBS)
- ❖ Interaction with federal energy conservation standards and regulations
- ❖ Mechanisms for determining compliance with standards
- ❖ Best practices for manufacturers, distributors and retailers
