Title 20

Certification Processes

California's Appliance Efficiency Regulations

Did you know many appliances are regulated under Title 20 and must be certified to the California Energy Commission (CEC) to be sold or distributed in the state?

And that **everyone** in the sales chain - **including Retailers** - is responsible for ensuring these products are listed in the CEC Appliance Efficiency Database?

Help is Available

We are here to help you ensure the products you are selling meet the requirements of California's appliance and equipment energy code, Title 20.

We understand that being in compliance is important to your bottomline - especially with the enforcement provisions introduced in Section 1609 of Title 20 in July 2015.

Our technical experts will:

- ❖ Explain the Title 20 regulations and what compliance means for your business
- ❖ Walk you through the process to confirm your products are certified to CEC Modernized Appliance Efficiency Database System (MAEDBS)
- ❖ Provide tips for talking with manufacturers and distributors

Helpful Resources

We offer training and resources on the following topics:

- ❖ Accessing the CEC Appliance Efficiency Database
- ❖ Mechanisms for determining compliance with standards
- ❖ Best practices for retailers, manufacturers and distributors
